

DMC Introduces the Ultimate Portable Crimp Press for Fiber Optic Assembly and Electronic Cable Crimping.

The UDT3 crimp tool features a system of interchangeable dies which eliminate the need of separate fixed die crimp tools for each and every different application.

The versatile UDT3 can be used as a bench top press or as a hand tool. It accepts DMC's common "X" series dies (M22520/10 Series), which are snapped into the tool frame and retained in place by internal spring clips. Dies may be permanently secured, if desired, by driving a roll pin into the holes provided.

Many maintenance and manufacturing concerns have been standardized on this model, eliminating the cost associated with maintaining and calibrating bulky inventories of single purpose tools. As new requirements evolve, a new set of dies is all that's required to meet the demand. A truly modern concept which will not require major change with time...only simple additions.

The tool frame is equipped with a positive ratchet assembly which controls complete handle movement in both directions.

Hexagonal crimp dies are available in a variety of combinations having single, double, and even triple cavity design. Consult DMC for Die part numbers.

Dies in various crimp patterns are also available for insulated and uninsulated terminal lugs, wire splices and end caps.

The UDT3 is 9" in length and weighs 11 oz.
